

Range and pasture products by Corteva Agriscience™ are effective tools in managing weeds and brush in permanent pasture and grazed rangeland. **Understanding precautions, restrictions and how to steward range and pasture products properly is important to ensure satisfactory results and to protect desirable species and the environment.** In consideration of the sale of range and pasture products by Corteva Agriscience or its authorized distributors or retailers, the undersigned acknowledges receipt of the following information, cautions and restrictions.

Grazon™ XC herbicide (active ingredients: picloram and 2,4-D) is a herbicide that provides effective control of a broad spectrum of annual and perennial broadleaf weeds, brush and trees. **Tordon™ 22K** herbicide (active ingredient: picloram) is a herbicide that is very effective for the control of deep-rooted, perennial and biennial weeds. It is essential to manage the use of Grazon XC and Tordon 22K effectively due to their persistent nature and non-selective control of broadleaf plants. **For this reason, Grazon XC and Tordon 22K are sold for use on permanent grass pastures and labeled uses only.**

Reclaim™ II herbicide (active ingredients: aminopyralid, Metsulfuron and 2,4-D) is a herbicide that provides effective control of a broad spectrum of annual and perennial weeds and woody shrubs. **Restore™ II** herbicide (active ingredients: aminopyralid and 2,4-D) and **Milestone™** herbicide (active ingredient: aminopyralid) are herbicides that provide effective control of a broad spectrum of annual and perennial broadleaf weeds. **For this reason, Reclaim II, Restore II and Milestone are for use on permanent grass pastures and labeled uses only.**

CAUTIONS AND RESTRICTIONS:

- Prior to application, read and follow label directions.
- Do not apply range and pasture products to garden or lawn areas. They are registered for permanent pasture only.
- Most grasses are tolerant to Grazon XC, Tordon 22K, Reclaim II, Restore II and Milestone. However, some grasses may show temporary symptoms like yellowing or delayed growth following an application.
- Do not apply any range and pasture products to areas where the elimination of legumes or other susceptible species cannot be tolerated.
- When applying Grazon XC and Tordon 22K, leave a buffer zone of at least 1.5 times the height of desirable trees. When applying Reclaim II, Restore II or Milestone stay outside the drip line of desirable trees.
- Please see the Stewardship and Best Practices fact sheet for more information about stewardship and best practices.
