

Hay, Manure, and Soil Management

If grass or vegetation must be removed from a treated area, it must only be placed or fed to livestock on **permanent pasture or rangeland** where loss of legumes or sensitive broadleaf species can be tolerated. Clippings from grass which have been treated with Dow AgroSciences herbicides should never be used for composting or mulching.

Manure from livestock consuming treated grass should never be used for compost or around susceptible plants. It should only be used in permanent pastures and rangeland where loss of legumes or sensitive broadleaf plants Never use for composting.

Soil from treated areas should never be moved to areas where sensitive plants may be planted within 5 years.
