Enlist Duo™ with COLEX-D™ technology

HERBICIDE

For use on soybeans and corn with the Enlist™ trait, Enlist Duo™ with Colex-D technology is the latest advance in herbicide formulation science.

Enlist Duo herbicide combines 2,4-D choline with glyphosate in a convenient herbicide blend designed to land and stay on target. The two modes of action work together to deliver exceptional weed control and herbicide resistance management.

Complete convenience

Only Enlist Duo herbicide combines the proven performance of 2,4-D choline and glyphosate. The two modes of action work together to deliver control of yield-robbing weeds and help prevent resistance.

This easy-to-use proprietary blended herbicide allows:

1. Improved control from two modes of action
2. Multiple modes of action in a convenient blend
3. Improved tank stability for a blend that stays mixed
4. Practical tank cleanout procedure

On-target application

Always read and follow the Enlist Duo product label. The following labeled directions will help to ensure successful and on-target applications:

- Boom height at 60 cm or less
- Optimum spray volume at 10-15 GPA
- Use nozzles designed to deliver coarse to extremely coarse spray droplets
- Do not apply during periods of dead calm. Target applications when winds are greater than 3 km/h but less than 16 km/h
- Do not spray during a temperature inversion

There are over 70 weeds on the Enlist Duo label including some of the toughest weeds – they don’t stand a chance, including:

- Common ragweed
- Giant ragweed
- Morning glory
- Palmer amaranth
- Canada fleabane
- Velvetleaf
- Lamb’s-quarters
- Waterhemp

90% less drift than traditional 2,4-D

The drift reduction from Colex-D technology combines with low-drift nozzles to cut drift by as much as 90% compared with traditional 2,4-D.

96% less volatile than 2,4-D ester

Near-zero volatility – up to 96% less than 2,4-D ester – helps keep Enlist herbicides in place and improve control.

Product Stewardship

The Program Approach

Controlling weeds in Enlist corn and Enlist E3 soybeans using a "program approach" will help ensure good agronomics, optimum yields and a sustainable system. A program approach means using pre-emergence residual herbicides with different modes of action followed by Enlist Duo post-emergence. Benefits of a program approach include:

- Reduced early season competition from annual grass and broadleaf weeds
- Multi-Mode of action for resistance management
- Timely post-emergent applications for optimum weed control and reduced weed competition
