Solutions for the Growing World

WHY USE ENTRUST?

- Naturalyte™ insecticide with broad pest control for organic growers.
- Highly selective on target pests, increasing safety to beneficial insects.
- Highly active at low use rates.
- Controls a broad spectrum of insects in apples two ways – by contact and ingestion – for quick knockdown and residual activity.
- Low toxicity to beneficials allows it to be used in IPM programs that rely on beneficials for control.

WHY USE DELEGATE?

- Performance. Delegate controls a broad spectrum of insects in apples two ways – by contact and ingestion – for quick knockdown and residual activity.
- Resistance management. Delegate contains a unique Group 5 active ingredient, making it an excellent tool in most IPM programs.
- Ease of use. Low use rates delivered through a convenient dry formulation.
- Minimize flare ups. Maintains most populations of beneficial insects; does not flare mites.

Delegate[™]
 INSECTICIDE

Group 5

WHY USE INTREPID?

- Safe to beneficials. May be applied at bloom without disrupting any beneficial insects, including bees, when used according to label directions.
- Excellent environmental profile. High level of safety to humans, bees, mammals, birds, aquatic organisms and groundwater.
- Novel Group 18 insecticide that controls lepidoptera by initiating lethal premature molting in both ovidical and larvidical life stages, causing feeding cessation within 24 hours.
- Residual control. Provides residual control for 10 to 14 days after application.

Intrepid[™]
 INSECTICIDE

Group 18

WHY USE CLOSER?

- Delivers super fast knockdown and residual control of sap-feeding pests including aphids and San Jose scale while minimizing flare-ups.
- Provides control of woolly apple aphid when applied in combination with an approved adjuvant.
- A unique Group 4C insecticide that is effective on insect populations resistant to other chemistries.
- Good fit in an IPM program.
