

LONGRUN™

LongRun™ 25 WG Herbicide

Why Use LongRun™ 25 WG Herbicide?

Broad spectrum. Controls many annual and perennial broadleaf weeds and grasses.

Wide application window. Can be applied any time of the year; best results are achieved with spring application.

Season-long control. Following a spring application, LongRun™ herbicide can provide season-long control of labeled broadleaf weeds and grasses.

What Is LongRun™ Herbicide?

LongRun™ is a broad spectrum, systemic herbicide providing season-long control of key annual and perennial broadleaf weeds and grasses. The active ingredient, Flazasulfuron, is a Group 2 herbicide. It can be applied either pre-emergence or post-emergence to control labeled broadleaf weeds and grasses. Best results are achieved when applied in the spring.

LongRun™ is active in low concentrations and stays in the upper surface of the soil layer. LongRun™ does not inhibit seed germination – it works by being absorbed through the roots of young plants. In many cases weeds do not emerge from the soil, and the few that do exhibit yellowing of the leaves and are controlled.

LongRun™ Herbicide Technical Specifications

Registered use: Industrial Vegetation Management sites and specified nonagricultural areas

Active ingredient	Flazasulfuron
Formulation	Water Dispersible Granule (WDG)
Mode of action	ALS inhibitor (Sulfonylurea)

Application Information

Application	Pre- and post-emergent control or suppression of grasses and broadleaf weeds
Rate	150-200 g/ha
Post-emergent application	Adjuvant is required (refer to label). Tank mixing with glyphosate is recommended.
Restrictions	Do not apply more than one application per year.

Labeled Broadleaf Weeds and Grasses

Grasses (pre- and post-emergent control):

- Downy brome – *Bromus tectorum*
- Giant foxtail – *Setaria faberi*
- Green foxtail – *Setaria viridis*
- Yellow foxtail – *Setaria glauca*
- Annual bluegrass – *Poa annua*
- Rough fescue – *Festuca scabrella*

Broadleaf weeds:

- Canada horseweed/Mare's tail – *Erigeron canadensis/ Conyza canadensis*
- Wild carrot – *Daucus carota*
- Chamomile, mayweed – *Anthemis cotula*
- Annual sowthistle – *Sonchus oleraceus*
- Common mallow – *Malva neglecta*

LongRun™ herbicide has a broad spectrum of activity controlling grasses, sedges and many broadleaf weeds. The low use rates and excellent environmental profile provide vegetation managers with a clear alternative for vegetation control.
